

1

Videoclip Opening

Starts playing automatically in full screen once the website is launched.

2

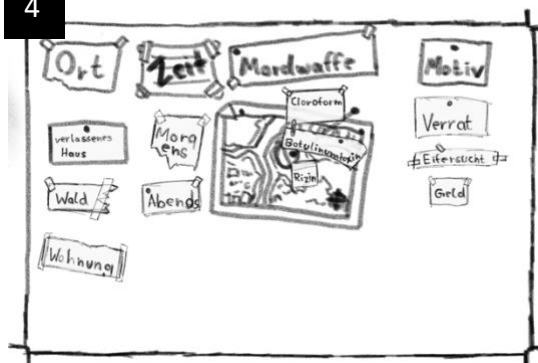

UI-Interface

First time this UI is seen, a selection is pre-made. The Selection is given automatically; the next clips start playing a few moments after.

3

Videoclip of the given selection starts playing in full screen.

4

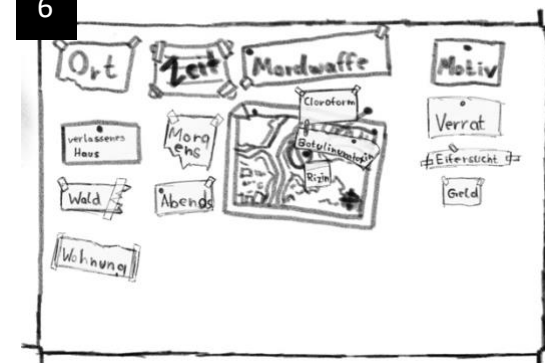

UI-Interface

From now on the viewer makes their own selections. In special circumstances (after certain scenes) there is a **voiceover** that should be played automatically once the viewer is back in the UI.

5

Videoclip of the made selection starts playing in full screen.

6

UI-Interface

Now the steps 4,5,6 repeat until the viewer gets the correct combination of attr. If he does, the product ends after the steps 5.

Important information:

The UI-Selection can be made via highlighted selection or preferably via a red string connecting selected elements. The Elements with the ATTR on them (the paper), as well as the entire design of the detective Board will be a texture!! It will not be programmed in HTML, just the texture that will be delivered to the dev-team.
